

Cure catheters plain

For intermittent self-catheterization. DEHP-free

The Cure catheters plain are smooth, uncoated and free from the aggressive softening agent DEHP. They are packaged individually and sterile, for single use. Both the male and the female catheters are fitted out with smooth polished eyelets, which makes insertion risk-free and prevents irritation.

• Colour coding

• Polished Eyelets

• Flexible connector

The main advantages at a glance

- Free from the aggressive softening agent DEHP
- Made according to the wishes of users and professionals
- Based on years of knowledge and experience
- Extensively tested, so safe and reliable
