

Cure hydrophilic coated catheters

For intermittent self-catheterization. DEHP-free

The Cure hydrophilic coated catheters are provided with a hydrophilic coating and free from the aggressive softening agent DEHP. They are packaged sterile and individually, for single use. Both the male and the female catheters are fitted out with smooth polished eyelets, which makes insertion risk-free and prevents irritation. Furthermore, all male catheters are fitted out with our unique Blue Grip®; an ingenious tool for inserting the catheters without having to touch it with the hands. This is much easier, more hygienic and it considerably reduces the risk of infections.

- **Blue Grip®**

- **Proper flexibility**

- **The hydrophilic coating is ready for use after 25 seconds**

The main advantages at a glance

- Free from the aggressive softening agent DEHP
- Fitted out with smoothly polished eyelets, which prevents irritation during insertion
- Hydrophilic coating (activated after 25 seconds)
- Easy and hygienic insertion (less risk of infection) with unique Blue Grip® insertion device on all male versions
